

## CLAIMS:

1. A CE apparatus having a network connection for a P2P network, and having an operational mode for querying the network about specific content recorded from a broadcast and for presenting multiple identical ones among a plurality of query results as a single item.
- 5 2. The CE apparatus of claim 1, wherein each different one of the plurality of query results is characterized by a respective identifier comprised in recorded metadata.
3. The CE apparatus of claim 2, wherein the respective unique identifier  
10 comprises a respective CRID.
4. The CE apparatus of claim 1, comprising a digital recorder for recording broadcast content.
- 15 5. The CE apparatus of claim 1, having a further operational mode for downloading the specific content from the P2P network.
6. Software for being installed on a networked-enabled CE apparatus for enabling to participate in a P2P network, the software rendering the apparatus operational for  
20 querying the network about specific content recorded from a broadcast and for presenting multiple identical ones among a plurality of query results as a single item.
7. The software of claim 6, operative to differentiate among the query results based on content identifiers in metadata.
- 25 8. The software of claim 7, wherein the content identifiers are based on CRIDs.
9. The CE apparatus of claim 1 or claim 2 or claim 3, wherein for the single item the multiple identical ones among the plurality of query results are counted.

10. A method for use on a Peer-to-Peer network, the method comprising enabling to query the network about specific content recorded from a broadcast and to present multiple identical ones among a plurality of query results as a single item.

5

11. The method of claim 10, wherein each different one of the plurality of query results is characterized by a respective identifier comprised in recorded metadata.

12. The method of claim 11, wherein the respective unique identifier comprises a  
10 respective CRID.

13. The method of claim 10 or claim 11 or claim 12, comprising counting, for the single item, the multiple identical ones among the plurality of query results.
